Opening KSi AutoDataV2

KSi AutoDataV2 can be accessed from the Dell Mini that you received with your order or from any computer on the same network. It may also be possible to access the system remotely. Talk with your network administrator or a qualified network service technician if you desire remote access.

1. Open your internet browser (e.g., Chrome, Firefox, or Internet Explorer)
2. Type <http://192.168.1.105/KSiAutoDataV2>

3. Push enter or click "Go".

Adding New User

When setting up new seeds, treatments, or orders, you will have to enter a user name for the person entering the new information. Each operator should have their own unique user name for tracking purposes.

1. Select the "User" menu and then "Add New User".

2. Now you are able to insert a New User Name. Then, click Save.

Customer	Operation	Account	First Name	Last Name	Address 1	Address 2	City	State	ZIP Code	Country	Mobile Phone	Business Phone	Email	Comment	Created Date
----------	-----------	---------	------------	-----------	-----------	-----------	------	-------	----------	---------	--------------	----------------	-------	---------	--------------

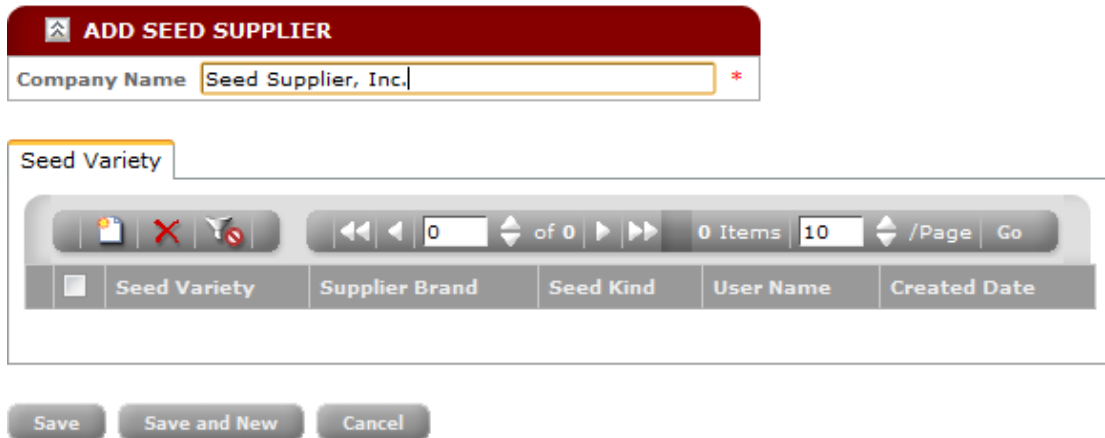

Adding New Seed

Each time you acquire new seed, whether a new variety or even a new lot of seed, you will need to enter the new seed information. In these steps, you will enter the relevant supplier information, seed identification, and seed properties such as Seed Count per Scale Unit of Weight. All of this information will be then be used for each order and easily accessible from a drop down menu.

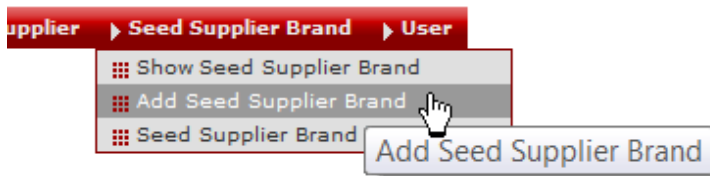

1. Start by adding the Seed Supplier. Select the “Seed Supplier” menu and then “Add Seed Supplier”.

2. Now you are able to insert a Seed Supplier company name. Then, click Save.

3. Some seed companies have multiple different seed brands. We’ve already included an “N/A” option that you can use if your seed does not require a separate brand. However, if you need to add a Seed Supplier Brand you need to select “Seed Supplier Brand” and then “Add Seed Supplier Brand” from the top menu.

- Now, enter the brand name in the “Supplier Brand” text box. Click Save to store the new brand name.

ADD SEED SUPPLIER BRAND

Save Save and New Cancel

- Add the Seed Variety. Select the “Seed Kind” menu and then “Add Seed Kind”.

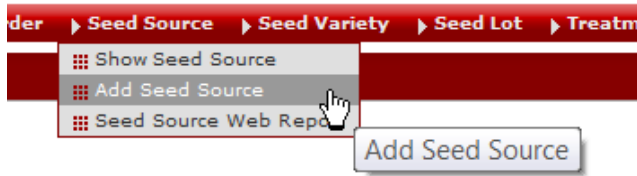

- Now, you need to fill in the Seed Variety name and select the appropriate Supplier, Supplier Brand, and Seed Kind that was entered in the prior steps. Click “Save” to store the new Seed Variety.

- You will need to add a seed lot when you receive each new delivery. Select the “Seed Lot” menu and then “Add Seed Lot”.

- The Seed Count per Scale Unit of Weight (in pounds), the Shipment Number, and the Seed Lot Data are required for each Seed Lot. Once the information is entered, click “Save” to store this Seed Lot.

11. The last step in setting up a new Seed is to enter the Seed Source which will be a bin or box location. Select the “Seed Source” menu and then “Add Seed Source”.

12. The Seed Source Name, Seed Source Capacity, Seed Lot description name, Seed Variety, and Seed Source Location are all required fields. Select “Save” to store the seed source.

A screenshot of a web application interface. At the top is a red header with the text 'ADD SEED SOURCE'. Below the header are several input fields: 'Seed Source Name' with the value 'Bin 1', 'Seed Source Capacity' with the value '50000', 'Seed Lot' with a dropdown menu showing 'ASDFB9837498ASK', and 'Seed Variety' with a dropdown menu showing '93Y70'. Below these is a text area for 'Seed Source Location' containing the text 'North End Row 1'. Below the form is a table with the title 'Pick UP Order'. The table has a toolbar with navigation icons and a page size dropdown set to '10'. The table has the following columns: 'Pick UP Order', 'Pick UP Order Name', 'Seed Units Ordered', 'Treatment Ind', 'Customer', 'Treatment Recipe', 'User Name', 'Comment', and 'Created Date'. At the bottom of the form are three buttons: 'Save', 'Save and New', and 'Cancel'.

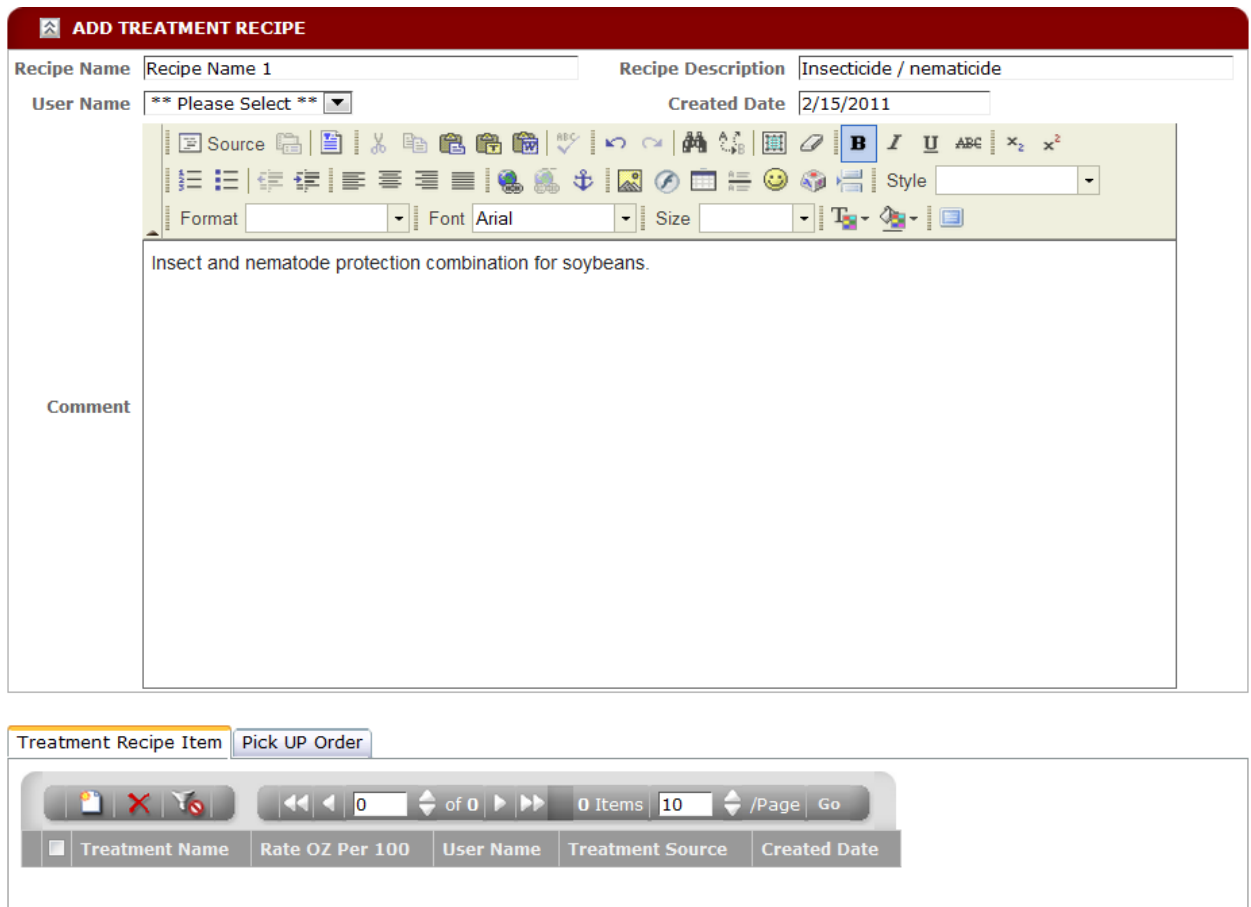

Adding a New Treatment

When you have a new seed treatment process you will need to set up the new treatment information. Follow these steps to define the seed treatment description and treatment items applied. After this, your new treatment recipe will be easily accessible in a drop down window.

1. Select the “Treatment Recipe” menu and then “Add Treatment Recipe”.

2. At this screen you will assign a name for the recipe and a Recipe Description. The comment field allows you to store detailed information on this particular treatment recipe. Select “Save” to store the recipe.

A screenshot of the 'ADD TREATMENT RECIPE' form. The form has a red header bar with the title 'ADD TREATMENT RECIPE'. Below the header, there are several input fields: 'Recipe Name' (containing 'Recipe Name 1'), 'Recipe Description' (containing 'Insecticide / nematocide'), 'User Name' (a dropdown menu with '** Please Select **'), and 'Created Date' (containing '2/15/2011'). Below these fields is a rich text editor with a toolbar containing various icons for text formatting (bold, italic, underline, font color, background color, text color, font size, font family, bullet points, numbered list, link, unlink, image, video, table, etc.). The text area contains the text 'Insect and nematode protection combination for soybeans.' Below the text area is a 'Comment' label. At the bottom of the form, there is a 'Treatment Recipe Item' label and a 'Pick UP Order' button. Below the form is a pagination bar with a search icon, a close icon, a refresh icon, and a list of items. The list shows '0 Items' and '10 /Page Go'. Below the pagination bar is a table with the following columns: 'Treatment Name', 'Rate OZ Per 100', 'User Name', 'Treatment Source', and 'Created Date'. At the bottom of the form, there are three buttons: 'Save', 'Save and New', and 'Cancel'.
